## RED HILL EXPLORATION PRODUCES RESULTS

~ New Western Slope Anomaly Discovered ~

---

### **To NuLegacy shareholders/stakeholders:**

Hi Folks,

[+ To view today's new release](#)

Our stated objectives for the summer 2017 exploration program of drilling 'wildcat' drill holes and conducting numerous geophysical and geochemical surveys throughout the 98-sq. km Red Hill property to find additional gold deposits (beyond the Iceberg) has produced results.

One of several CSAMT (Controlled Source Audio-frequency Magneto-telluric) geophysical surveys recently completed together with a subsequent confirmatory Au-As-Sb (Gold, arsenic and antimony) soil geochemical survey has discovered what we are referring to as the Western Slope anomaly.

It is another Carlin-type gold system approximately 1,000 meters west of the Iceberg gold deposit completely covered by post-mineral volcanic rocks and thus until now was blind to the surface; it appears to be as big as and possibly thicker than the Iceberg gold deposit. We will drill it as soon as we have completed the analysis (preparation of 3D model, etc.) and permitted the resulting targets.
